

USING AN ONLINE TRANSPOSER

This will not work with the chord diagram version, but by scrolling down on my songs, you'll find a version with just chord names over the lyrics.

For best results, change the pdf to a Word document. Copy the document, and paste it into the transposer. You can then transpose the song either up (+) or down (-). My current favorite online transposer is <http://tabtransposer.com>.

Once you have copied the transposed result into your word processor, you need to select the song and return to my specs, to get the chart to look similar to the original. Those specs are: font "Times New Roman," font size "12," bold, black. The title is font size "20," and the time signature and intro are both "14."

(You have to check the result carefully. Certain chord names, like "MA7" or "m7b5" do not transpose using the table)
